DETAILED ACTION

Response to Arguments

Applicant's arguments filed December 3, 2004 have been fully considered but they are not persuasive.

On Pages 13-14, applicant argues that Okada et al, fails to teach, disclose, or suggest the following limitation: "..wherein the file structure has a first data unit and a second data unit, the second data unit being a set of the first data units, and wherein at least one data structure is matched with the first data unit as presented in independent Claims 1, 5, 6,12,14,15, and 16. It is noted that Okada et al shows an original PGC information table (first data set) and a user-defined PGC information table (second data set) as seen in Figure 70a. Furthermore, it is stated in Columns 77 Lines 17-50 that each set of original PGC information corresponds to one of the VOBs, which can be seen in further detail in Figure 89a wherein cell #3 of the original PGC#1 is matched to cell #3a of the user-defined PGC #1. This method of matching data between the original PGC information table (first data set) and the user defined PGC information table (second data set) is further described in Column 80 Lines 32-67 and thereby meets the limitations. Although, applicants points are understood the examiner can not agree and therefor the rejection is maintained.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 09/663,731

Art Unit: 2616

Page 3

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 10-21 are rejected under 35 U.S.C. 102(b) as being unpatentable by Okada et al (US 6,181,870).

[claims 1, 2, 4, 5, 6, 12, 13, 14, 15, 16, 17, 18, 19, 20, & 21]

In regard to Claims 1, 2, 4, 5, 6, 12, 13, 14, 15, 16, 17, 18, 19, 20, and 21, Okada et al discloses a recording apparatus and method for recording video and audio data to a recording medium, rewritable optical disc, comprising:

- Encoding means for encoding video data in a group structure of a plurality of
 frames corresponding to a compression-encoding process in a combination of an
 inter-frame predictive encoding process and a motion compensative process
 (Figure 18 shows an encoder in which an inter-frame predictive encoding process
 and a motion compensative process is met through the MPEG encoder as well
 being well known in the art);
- Audio output means for outputting compression-encoded or non-compressed audio data (Figure 17 shows audio output signal used for outputting all audio data);
- Transforming means for transforming the data structure of encoded video or encoded audio data that is output from said encoding means and audio data that is output from said audio output means into a file structure that can be processed by a computer software program without a dedicated hardware portion so that moving pictures and so forth are synchronously reproduced and multiplexing the encoded video data and the audio data having the file structure (Figure 17 C1

Art Unit: 2616

transforms the output of the MPEG encoder into a file that can be processed by a computer system as further described in Column 37 Lines 40+ and seen in Figure 21);

- Recording means for recording multiplexed data having the file structure to a
 record medium, such as an optical disc (Figure 17 recording element 3 records the
 file structure information); and
- File structure has a first data unit and a second data unit, the second data unit being a set of the first data units (Figure 70a shows a first data set/original PGC information table and a second data set/user-defined PGC information table which is a subset of the first/original set), wherein
 - o at least one data structure is matched with the first data structure (Figure 89a one can see the matching of the first/original set to the second/user-defined set as seen by the arrows from Cell#3 in the original to Cell#3a in the user-defined set); and
 - o the second data unit is matched with a successive record of length of data written to the optical disc (Figure 89a shows the second data (cell #7a) being matched with subsequent length of the first/original data set (Cell #7) as seen by the length of time of each segment).

[claim 3]

In regard to Claim 3, Okada et al further discloses the compression-encoding process is MPEG, a GOP structure (Figure 4a and 4b and further described in Column 15 Lines 28-38), and date of the sequence header is added to each GOP that is matched with the first data unit (Figure 6F-6H)

shows the headers for the data that is added to each GOP and it is further described in Column 23 Lines 14+ that packet start codes shows the time at which the data is stored in the present back and when it should be inputted into the various buffers thereby allowing for a comparison match with the first/original data unit).

[claim 7]

In regard to Claim 7, Okada et al further discloses a recording apparatus wherein the duration of the encoded video data of the second data unit is the same as the duration of the encoded audio data of the second data unit (Figure 89a shows the second data (cell #7a) being matched with subsequent length and duration of the first/original data set (Cell #7) as seen by the length of time of each segment).

[claim 8]

In regard to Claim 8, Okada et al further discloses a recording apparatus wherein the encoded video data of the second data unit and the encoded audio data of the second data unit are alternately placed in the multiplexed data, each of the encoded video data of the second data unit and the encoded audio data of the second data unit being matched with successive record length (Figure 71 shows the encoded AV data being alternately placed in the multiplexed data unit of the user defined chain PGC#3 with each record being matched with the successive length due to the time map table as seen in the Original PGC #1 and #2).

[claims 10 & 11]

In regard to Claims 10 and 11, Okada et al further discloses a recording apparatus wherein the file structure further includes a data portion containing management information and the data portion contains size information of the first data unit and position information of the second

Application/Control Number: 09/663,731

Art Unit: 2616

data unit (Figure 36 shows the mangement information for the file system, aside from of the sector management table and AV block management table which is seen in Figure 6).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Okada et al (US 6,181,870).

[claim 9]

In regard to Claim 9, Okada et al fails to disclose a recording apparatus wherein the audio data is compression-encoded corresponding to the ATRAC and the first data unit of the file structure contains at least one sound unit of ATRAC. The examiner takes official notice that it is well known in the art to use mini discs as recording apparatus, which thereby use Adaptive Transform Acoustic Coding (ATRAC). It would be obvious to one skilled in the art at the time of the invention for Okada et al to use a mini disc apparatus for editing and recording purposes and thereby using ATRAC.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2616

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Contact Fax Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jamie Vent whose telephone number is 571-272-7384. The examiner can normally be reached on 7:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Faile can be reached on 571-272-7375. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
